

Knowing the performance of your lights helps you understand what to do in post production in order to correct any deviation of colours.

The EBU has published Tech 3355.zip - TLCI-2012 Software to provide guidance.

The first set of independant lighting measurements has been done using this software.

*Note the selection of lights in the .zip file is given for the convenience of users and does not constitute an endorsement of the product. The d value indicates a green/magenta shift: a value of +0.6 is approximately the effect of a CT +1/8 green filter, a value of -0.6 is approximately the effect of a CT -1/8 magenta filter.

TLCI results on 23/01/2018
